$PP_i$  is the number of paid passenger journeys during the preceding month, and it is calculated as the count of sales for all fare types during the preceding month.

**(ii) Calculation of average passenger fare**

During the first 10 days of each month, the **average passenger fare** will be calculated in accordance with the following formula:

$$AUF_i = \frac{\text{Fare revenue}_i}{PP_i}$$

Where,

$AUF_i$  is the average user fare for the preceding month

**(iii) Variation of the Contingency and Fare Stabilization Fund**

During the first 10 days of each month, the new balance in the Contingency and Fare Stabilization Fund will be determined by calculating the change in the preceding month in accordance with the following formula:

$$\Delta CF_i = (AUF_i - TF_i) \times PP_i$$

Where,

$\Delta CF_i$  is the change in the preceding month in the amount of money in the contingency and fare stabilization fund.

**(iv) Determination of the need for a fare adjustment**

After calculation of the technical fare and the average user fare for the preceding month, the need for a fare adjustment shall be determined in accordance with the following formula:

$$100 \times ((TF_i/AUF_i)-1)$$

where,

$TF_i$  is the technical fare during the preceding month and  $AUF_i$  is the average user fare for the preceding month.

If the resulting value is greater than or equal to 8%, base passenger fare(s) must be adjusted upward. If the resulting value is less than or equal to -8%, the base passenger fare(s) must be adjusted downward. The downward adjustment may only be made if the calculated balance in the Contingency and Fare Stabilisation Fund is sufficient to cover a further three months of payments to the Bus Operating Company.
