Where s is the factor of rise in accordance with the mean gradient of the land to be actually excavated for the erection of the garage such gradient to be measured at right angles to and from a point on the street boundary vertically opposite to the centre of that side of the garage which is most clearly parallel to the street boundary of the erf and h is the difference between the mean level of the floor of the garage and the mean ground level at a point on the street boundary vertically opposite the centre of that side of the garage which is most nearby parallel to the street boundary of the erf, such difference to be positive or negative as the floor level of the garage is respectively below or above the mean ground level at the point specified.
