STANDARDS ACT, 1993
STANDARDS MATTERS

In terms of the Standards Act, 1993 (Act No. 29 of 1993), the Council of the South African Bureau of Standards has acted in regard to standards in the manner set out in the Schedules to this notice.

All South African standards that were previously published by the South African Bureau of Standards with the prefix "SABS" have been redesignated as South African national standards and are now published by Standards South Africa (a division of SABS) with the prefix "SANS".

A list of all existing South African national standards was published by Government Notice No. 1373 of 8 November 2002.

In the list of SANS standards below, the equivalent SABS numbers, where applicable, are given below the new SANS numbers for the sake of convenience. Standards that were published with the "SABS" prefix are listed as such.

SCHEDULE 1: ISSUE OF NEW STANDARDS

The standards mentioned have been issued in terms of section 16(3) of the Act.

Standard No. and year	Title, scope and purport
SANS 408:2007	<i>Coal and coke - Analysis and testing - High rank coal ash and coke ash - Major and minor elements - Wavelength dispersive X-ray fluorescence spectrometric method.</i> A wavelength dispersive X-ray fluorescence procedure for the determination of silicon, aluminium, iron, calcium, sodium, potassium, titanium, manganese, phosphorus and sulfur.
SANS 478:2007/ EN 1493:1998	<i>Vehicle lifts.</i> Specifies requirements for stationary, mobile and movable vehicle lifts, which are not intended to lift persons but which are designed to raise vehicles totally, for the purpose of examining and working under the vehicles whilst in a raised position. The vehicle lift may consist of one or more lifting units. Power supply to the vehicle lift by internal combustion engines is not considered. The floor or ground supporting the vehicle in use is assumed to be horizontal.
SANS 507-1 :2007/ NRS 034-1 :2007	<i>Electricity distribution - Guidelines for the provision of electricity distribution networks in residential areas - Part J: Planning and design of distribution networks.</i> Covers the planning and design of economical residential electricity distribution networks that are capable of compliance with probable demands with safety and reliability, whilst maintaining the voltage within the prescribed limits. Is a general guide to good technical practice for economical overhead and underground systems.
SANS 857-2:2007/ ISO 857-2:2005	<i>Welding and allied processes - Vocabulary - Part 2: Soldering and brazing processes and related terms.</i> Defines terms used for metal soldering and brazing processes, as well as related terms. The processes have been classified according to their physical characteristics and the type of energy source.
SANS 2001-CMI:2007	<i>Construction works - Part CMI: Masonry walling.</i> Establishes construction requirements for masonry walls. It also establishes requirements for materials, the laying of masonry units in unreinforced and reinforced applications, the building in of door and window frames, holes and chases, the securing of timber roof structures and the fixing of slips.
SANS 10823:2007/ ISO 10823:2004	<i>Guidelines for the selection of roller chain drives.</i> Gives guidelines for the selection of chain drives, composed of a roller chain and sprockets conformant with ISO 606, for industrial applications. The selection procedures and the chain ratings it describes provide for roller chain drives operating under specified conditions, as defined in 9.1, 9.2 and in Clause 10, with a life expectancy of approximately 15 000 h. Owing to the wide variations in loading characteristics, environmental conditions and achieved maintenance, it is desirable that the supplier of the chains and sprockets be consulted to ensure that the performance of product meets the requirements specified both by the user and by this International Standard.
SANS 15607:2007/ ISO 15607:2003	<i>Specification and qualification of welding procedures for metallic materials - General rules.</i> Defines general rules for the specification and qualification of welding procedures for metallic materials. Also refers to several other standards as regards detailed rules for specific applications. This standard is applicable to manual, mechanized and automatic welding. Welding procedures are qualified by conforming to one or more welding procedure qualification records (WPQR). This standard is part of a series of standards and provides details as well as a flowchart on the use of these standards. Provides a flow diagram for the development and qualification of a WPS.
SANS 15609-1 :2007/ ISO 15609-1 :2004	<i>Specification and qualification of welding procedures for metallic materials - Welding procedure specification - Part J: Arc welding.</i> Specifies requirements for the content of welding procedure specifications for arc welding processes.
SANS 15614-1:2007/ ISO 15614-1:2004	<i>Specification and qualification of welding procedures for metallic materials - Welding procedure test - Part J: Arc and gas welding of steels and arc welding of nickel and nickel alloys.</i> Part of a series of standards. Specifies how a preliminary welding procedure specification is qualified by welding procedure tests. Defines the conditions for the execution of welding procedure tests and the range of qualification for welding procedures for all practical welding operations within the range of variables listed in clause 8. Applies to the arc and gas welding of steels in all product forms and the welding of nickel and nickel alloys in all product forms. Contains principles which may be applied to other fusion welding processes.

Standard No. and year	Title, scope and purport
SANS 15614-2:2007/ ISO 15614-2:2005	<i>Specification and qualification of welding procedures for metallic materials – Welding procedure test – Part 2: Arc welding of aluminium and its alloys.</i> Specifies how a preliminary welding procedure specification is qualified by welding procedure tests. Part of a series of standards. Defines the conditions for the execution of welding procedure tests and the range of qualification for welding procedures for all practical welding operations within the range of variables listed in clause 8. Applies to the arc welding of wrought and cast aluminium and its alloys. Does not apply to finishing welding of aluminium castings. Contains principles which may be applied to other fusion welding processes.

SCHEDULE 1

Definitions

1. (1) In these Regulations:

"Area measuring instrument" means a measuring instrument that is designed and constructed to measure and automatically indicate the superficial area of leather or other approved materials passed through it.

"Automatic weighing instrument" means a massmeter provided with a self-acting mechanism for-

- a) the measurement of the mass of predetermined quantities of materials, the feed to and delivery from the load receptor being automatically controlled;
- b) the measurement of the mass of quantities of materials approximately predetermined and the recording and summation of the actual mass of the quantities measured, the feed to and delivery from the load receptor being automatically controlled;
- c) the measurement of the mass of any material passed intermittently or in a continuous stream over the load receptor that may be in the form of a conveyor belt, and the automatic summation of the mass of such material; or
- d) the performing of any function similar to those referred to in a), b) and c) of this definition.

"Conventional measure of volume" means a measure of conventional design used for measuring liquid substances having a datum level or levels which define the quantity or quantities which can be measured by means thereof and which conforms to the applicable requirements of the Trade Metrology Act but which does not require type approval in terms of section 18 thereof.

"In motion weighing system for vehicles" means a massmeter for the determination of the mass of vehicles while in motion.

"Length measuring instrument" means a measuring instrument that is designed and constructed to measure and automatically indicate the length of fabrics or other approved materials passed through it.

"Liquid fuel dispenser" means a measuring assembly comprising a pump, meter and ancillary equipment for the measurement and delivery of liquids, including liquid petroleum gas, as approved during type approval into the tanks of vehicles, boats or small aircraft or into other receptacles.

"Liquid measuring device" means an apparatus for delivering predetermined volumes of liquid into drums, barrels, bottles or other receptacles, but excluding a liquid fuel dispenser and any liquid meter for predetermined quantities.

"Liquid meter" means a measuring assembly other than a liquid fuel dispenser comprising a meter and ancillary equipment for the measurement of liquids other than water as approved during type approval.

"Masspiece for fine measurement" means a masspiece used with a massmeter for pharmaceutical dispensing or the measurement of precious metals, precious stones and comparable goods.

"Masspiece for course measurement" means a masspiece used with a massmeter for the measurement of general goods not required to be measured using masspieces for fine measurement.

"Non-automatic weighing instrument" means a massmeter that requires the intervention of an operator during the weighing process, for example to deposit on or remove from the load receptor the load to be measured and also to obtain the result.

"Vehicle scale" means a non automatic massmeter for the determination of the mass of rail or road vehicles and having a load receptor in the form of a rail track or of a platform or platforms or a combination of these on to which rail or road vehicles may be moved for the measurement of their mass.

"Vehicle tank" means a receptacle which may or may not be subdivided into two or more compartments, the tank or each compartment having a capacity of not less than 200 L, mounted on a motor truck or trailer and provided with a single datum level or a removable gauge, which is graduated to indicate various volumes, for the measurement of the quantity of a liquid contained in the tank or a compartment thereof.

(2) All the measuring instruments, or classes or kinds of such measuring instruments defined in this Schedule and mentioned in column 1 of Schedule 2, must be verified, certified or recertified by the date specified in column 3, unless they were verified, certified or recertified before that date and within the period specified in column 2. Thereafter such measuring instruments must be reverified or recertified at intervals not exceeding the intervals specified in column 2 and determined from the date of last verification, certification or recertification.

(3) A conventional measuring instrument of volume made of clear glass and a conventional measuring instrument of length made of a material prescribed by regulation must be verified or certified before being taken into use and thereafter only on the instruction of an inspector if he has reasonable grounds for believing that it has been altered materially since it was verified or certified, or unless the original stamp of verification or certification has been defaced or has become illegible.

BOARD NOTICE RAADSKENNISGEWING

BOARD NOTICE 74 OF 2007

Accounting Standards Board

INVITATION TO COMMENT ON THE PROPOSED DELETION OF TRANSITIONAL PROVISIONS IN THE STANDARDS OF GRAP AND DIRECTIVES CONTAINING THE TRANSITIONAL PROVISIONS

Issued: 20 July 2007

Section 89(1)(b) of the Public Finance Management Act, Act No 1 of 1999 as amended (PFMA), allows the Accounting Standards Board (the Board) to prepare and publish directives and guidelines concerning the Standards of GRAP as set in paragraph 89(1)(a) of the PFMA. *The Preface to the Standards of GRAP* determines that directives will be used to set transitional provisions and transitional arrangements for the entities required to comply with the Standards of GRAP. Directives issued by the Board in terms of section 89(1)(b) of the PFMA have the same authority as the Standards of Generally Recognised Accounting Practice (GRAP).

The Board at its meeting held on 21 June 2007 approved the invitation to comment on the deletion of transitional provisions currently included in the Standards of GRAP, and three invitations to comment on directives prescribing the specific transitional provisions for entities based on their capacity to implement the approved Standards of GRAP:

- ED 39 • Proposed deletion of transitional provisions in Standards of GRAP
- ED 40 • Directive on transitional provisions for public entities and constitutional institutions
- ED 41 • Directive on transitional provisions for high capacity municipalities
- ED 42 • Directive on transitional provisions for medium and low capacity municipalities

When the directives are approved by the Board, the Board intends to replace the transitional provisions currently included in the Standards of GRAP with the applicable directive containing the transitional provisions to be applied by entities on initial adoption of the Standard of GRAP. Where appropriate, directives will also include a paragraph dealing with the withdrawal of the Standard of GAMAP where an equivalent Standard of GRAP has been issued.

As these directives presents challenges for some preparers, auditors and users of general purpose financial statements, the Board is grateful for the time respondents are devoting to consider the issues in the invitations to comment. The responses will form a valuable input into the standard setting process, and those who might be affected by, or are interested in, the documents issued by the Board are encouraged to continue to provide responses to the documents released by the Board.

The comment period for the guideline ends on 31 October 2007.
