12. At least two per cent of the containers in a consignment shall be drawn at random for inspection purposes and an Inspector shall be satisfied that the containers so drawn are representative of the consignment concerned.

Obtaining an inspection sample

13. An inspection sample shall be drawn from each container obtained in accordance with regulation 12 and shall, in the case of --

- (a) containers with 50 plums and prunes or less, consist of the entire contents of the container; or
- (b) containers with more than 50 plums and prunes, consist of 50 adjacent plums and prunes drawn at random from the container.

Deviating sample

14. If an inspector should notice during the process of drawing the random sample or during the inspection, that some of the containers derived from any part of the pallet load, truck load or consignment, contain plums and prunes which are noticeably inferior to or differ from the contents of the containers which represent the remainder of the pallet load, truck load or consignment, the inspection results shall be based only on the containers derived from the deviating portion of the pallet load, truck load or consignment, and further samples required for inspection shall be drawn from this deviating portion.

METHODS OF INSPECTION***Determination of internal defects***

15. Internal defects of plums and prunes shall be determined as follows:

- (a) Randomly take 10 plums and prunes from the inspection sample obtained in accordance with regulation 13.
- (b) Bisect each of the 10 plums and prunes with a knife through their equatorial axes.
- (c) Calculate the number of plums and prunes thus found to be affected by internal defects, as a percentage of the total number of plums and prunes in the inspection sample.
- (d) Determine the average percentage of all the inspection samples taken in accordance with regulation 13.

Determination of the declared minimum and maximum size

16. The declared minimum and maximum size shall be determined as follows:

- (a) Take as working sample plums and prunes that are noticeably the smallest and/or largest in diameter from the inspection sample obtained in accordance with regulation 13.
- (b) Determine the diameter of the plums and prunes obtained in paragraph (a) with a suitable apparatus.
- (c) Calculate the number of plums and prunes thus found to be too small and/or too large as a percentage of the total number of plums and prunes in the inspection sample.
- (d) Determine the average percentage of all the inspection samples taken in accordance with regulation 13.

Determination of ripeness

17. (1) For the determination of ripeness of plums and prunes, the following apparatus shall be used:

- (a) A calibrated refractometer.
- (b) A handheld penetrometer or a penetrometer mounted on a drill stand with a plunger of 11,2 millimetre in diameter.

(2) If the calibrated refractometer is used to determine the total soluble solids (TSS), the following procedure shall be followed:

- (a) Place an equal number of drops (2 or more) of juice onto the prism plate of the refractometer.

- (b) Note the reading on the prism scale to one decimal place.
 - (c) Repeat the steps in paragraphs (a) and (b), after the prism plate was cleaned with distilled water and wiped dry.
 - (d) Determine the average of the two readings.
- (3) If a handheld penetrometer or a penetrometer mounted on a drill stand is used, the following procedure shall be followed:
- (a) Remove a thin layer of skin on both cheeks of each plum and prune.
 - (b) Hold the plum and prune firm with one hand: Provided that if a handheld penetrometer is used, your hand should rest on a rigid surface.
 - (c) Zero the penetrometer and place the plunger head of 11,2 millimetre in diameter on the spot where the skin was removed.
 - (d) Aim at the center of the fruit and apply steady downward pressure on the penetrometer until the plunger has penetrated the flesh of the plum and prune up to the depth mark of the plunger.
 - (e) Remove the plunger and note the reading on the penetrometer, to one decimal.
 - (f) Repeat the process on the opposite side of the same plum and prune after zeroing the penetrometer.
 - (g) Calculate the average of the two pressure readings for each plum and prune.

(2) Subject to the provisions of subregulation (1), each outer container containing prepacked units shall be marked with an indication of the total number of prepacked units per outer container: Provided that if the total number of prepacked units is visible from the outside, it does not have to be indicated on the outer container.

(3) If an indication highlighting a special grading, presentation or size is indicated on the same side as the particulars in subregulation (1), it shall not be used with the expression "Peaches" or "Nectarines", the cultivar name or the class indication.

Prohibited particulars

11. No wording, illustration or other means of expression which constitutes a misrepresentation or which directly or by implication, creates a misleading impression of the contents shall appear on a container which contains peaches and nectarines.

PART IV SAMPLING PROCEDURES

Obtaining a sample from the consignment

12. An inspector shall draw at random for inspection purposes of at least two per cent of the containers in a consignment and shall be satisfied that the containers so drawn are representative of the consignment concerned.

Obtaining an inspection sample

13. An inspection sample shall be drawn from each container obtained in accordance with regulation 12 and shall in the case of --

- (a) containers with 50 peaches and nectarines or less, consist of the entire contents of the container; or
- (b) containers with more than 50 peaches and nectarines, consists of 50 adjacent peaches and nectarines drawn at random from the container.

Deviating sample

14. If an inspector should notice during the process of drawing the random sample or during the inspection, that some of the containers derived from any part of the pallet load, truck load or consignment, contain peaches and nectarines which are noticeably inferior to or differ from the contents of containers which represent the remainder of the pallet load, truck load or consignment, the inspection result shall only be based on the containers derived from the deviating portion of the pallet load, truck load or consignment, and further samples required for inspection shall be drawn from this deviating portion.

PART V METHODS OF INSPECTION

Determination of ripeness

15. (1) The ripeness of all peach and nectarine cultivars in a consignment shall be determined with a handheld penetrometer or a penetrometer mounted on a drill stand with a plunger of 11,2 mm in diameter.

- (2) (a) The ripeness of all peach and nectarine cultivars, excluding the nectarine cultivars Armking, Nectared 9 and April Glo, shall be determined as follows:

- (i) Take as working sample 10 adjacent peaches and nectarines at random,

- from the inspection sample obtained in accordance with regulation 13: Provided that such peaches and nectarines shall be free from defects such as sunburn and pests or disease damage, which may have affected the normal ripening process.
- (ii) Remove a thin slice of peel from opposite sides on the center of each peach and nectarine, in such a manner that the suture of the peach and nectarine is avoided.
 - (iii) Hold the peach and nectarine firmly with one hand: Provided that if a handheld penetrometer is used your hand must rest on a rigid surface.
 - (iv) Zero the penetrometer and place the plunger head of 11,2 millimetre in diameter on the spot where the skin was removed.
 - (v) Apply steady downward pressure on the penetrometer until the plunger has penetrated the flesh of the peach and nectarine up to the depth mark of the plunger.
 - (vi) Remove the plunger and note the reading on the penetrometer, to one decimal.
 - (vii) Repeat the process on the opposite side of the same peach and nectarine after zeroing the penetrometer.
 - (viii) Determine the average of the 2 pressure readings for each peach and nectarine.
- (b) If the average pressure readings of three or more peaches and nectarines exceed the maximum pressure set out in Table 3 for the specific cultivar, such a consignment does not comply with the ripeness requirements.
- (3) (a) The ripeness of the nectarine cultivar Armking and April Glo shall be determined as follows:
- (i) Take as working sample 10 adjacent nectarines at random from the inspection sample obtained in accordance with regulation 13: Provided that such nectarines shall be free from defects such as sunburn and pests or disease damage, which may have affected the normal ripening process.
 - (ii) Remove a thin slice of peel on the suture, 11 millimetre from the tip of the nectarine, as well as from the same position on the opposite side of the nectarine.
 - (iii) Hold the nectarine firmly with one hand: Provided that if a handheld penetrometer is used your hand must rest on a rigid surface.
 - (iv) Zero the penetrometer and place the plunger head of 11,2 millimetre in diameter on the spot where the skin was removed.
 - (v) Apply steady downward pressure on the penetrometer until the plunger has penetrated the flesh of the nectarine up to the depth mark of the plunger.
 - (vi) Remove the plunger and note the reading on the penetrometer, to one decimal.
 - (vii) Repeat the process on the opposite side of the same nectarine after zeroing the penetrometer.
 - (viii) Determine the average of the 2 pressure readings for each nectarine.

- (b) If the average pressure readings of three or more nectarines exceed the maximum pressure set out in Table 3 for the specific cultivar, such a consignment does not comply with the ripeness requirements.
- (4) (a) The ripeness of the nectarine cultivar Nectared 9 shall be determined as follows:
 - (i) Take as working sample 10 nectarines at random from the inspection sample obtained in accordance with regulation 13: Provided that such nectarines shall be free from defects such as sunburn, bruises and pests or disease damage, which may have affected the normal ripening process.
 - (ii) Remove a thin slice of peel on the suture, 25 millimetre from the tip of the nectarine, as well as from the same position on the opposite side of the nectarine.
 - (iii) Hold the nectarine firmly with one hand: Provided that if a handheld penetrometer is used your hand must rest on a rigid surface.
 - (iv) Zero the penetrometer and place the plunger head of 11,2 millimetre in diameter on the spot where the skin was removed.
 - (v) Apply steady downward pressure on the penetrometer until the plunger has penetrated the flesh of the nectarine up to the depth mark of the plunger.
 - (vi) Remove the plunger and note the reading on the penetrometer, to one decimal.
- (b) If the pressure readings of three or more nectarines exceed the maximum pressure set out in Table 3 of Annexure 1 for the specific cultivar Nectared 9, such a consignment does not comply with the ripeness requirements.

Determination of the declared minimum and maximum size

16. The declared minimum and maximum size shall be determined as follows:
- (a) Take as working sample from the inspection sample obtained in accordance with regulation 13, the peaches and nectarines that are noticeably the smallest and/or largest in diameter.
 - (b) Determine the diameter of the peaches and nectarines in paragraph (a) with a suitable apparatus.
 - (c) Calculate the number of peaches and nectarines thus found to be too small and/or too large, as a percentage of the total number of peaches and nectarines in the inspection sample.
 - (d) Determine the average percentage of all the inspection samples obtained in accordance with regulation 13.

Determination of broken stones and other internal quality defects, excluding split stones

17. Broken stone and other internal quality defects, excluding split stones, shall be determined as follows:
- (a) Take as working sample the 10 peaches and nectarines which are, in the opinion of the inspector, the most likely to have broken stones and other internal quality defects, excluding split stones, from the inspection sample obtained in accordance with regulation 13.
 - (b) Cut each of the ten peaches and nectarines with a knife on the suture around the fruit to the stone.
 - (c) Wring the two halves of each peach and nectarine in opposite directions to expose the stone

- and other internal quality defects.
- (d) Calculate the number of peaches and nectarines thus found to have broken stones or other internal quality defects, excluding split stones, as a percentage of the total number of peaches and nectarines in the inspection sample.
- (e) Determine the average percentage of all the inspection samples taken in accordance with regulation 13.

PART VI

Offence and penalties

18. Any person who contravenes or fails to comply with the provisions of these regulations shall be guilty of an offence and may upon conviction be liable to a fine or to imprisonment in terms of section 11 of the Act.

(2) Such person shall pay the prescribed fee with the Inspector or at any office of the Executive Officer, as the case may be: Provided that such fee shall be paid in terms of each separate consignment, and provided further that if the notice of appeal and the fee are not submitted and paid within the period specified in subregulation (1), the appellant shall lose his right of appeal.

(3) An inspection may apply any mark or marks which he/she may deem necessary for identification purposes to the peaches and nectarines in respect of which an appeal has been submitted, or to the containers thereof, and such peaches and nectarines shall not without his/her consent, be removed from the place where they were inspected or where they are stored.

(4) The Executive Officer shall designate at least three persons to serve as an appeal board.

(5) Such an appeal board shall give the appellant or his/her representative at least two hours notice of the time and place determined for the hearing of the appeal and may, after the peaches and nectarines concerned have been produced and identified and all interested parties have been heard, instruct all persons to leave the place where the appeal is being considered: Provided that the appeal board may make use of persons to assist in an advisory capacity.

(6) An appeal board shall decide an appeal within 48 hours (excluding Sundays and public holidays) after it was submitted, and its decision shall be final.

(7) If the peaches and nectarines concerned are not produced at the time and place determined by the appeal board, the amount paid in respect thereof shall be forfeited.
